

LEAN AGRIBUSINESS

Three Day Training Course

AG LEAN LEADER

Refine your operation to improve the efficiency and profitability of your agribusiness.

WHAT IS LEAN?

Developed in Japan by Toyota after World War II, Lean is a business management system designed to create more value for customers while using resources more efficiently.

Lean focuses on improving the efficiency and effectiveness of a business by systematically identifying and removing waste to improve product and service delivery while reducing costs.

Over the last 40 years Lean has been successfully implemented around the world in manufacturing, healthcare, finance, government and service industries including John Deere, Caterpillar, Nike and Kimberley-Clarke.

LEAN IN AGRICULTURE

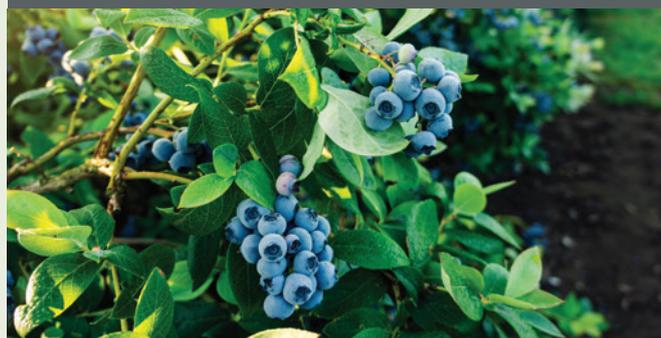

Did you know that every function within your agricultural operation benefits from the application of Lean? Lean is so much more than pack sheds and factories - when systematically applied to an agribusiness, the principles, tools and techniques of Lean can:

- › Reduce waste across growing, processing, maintenance, supply chain systems and finance.
- › Improve product and service quality, customer satisfaction, raw material flow, productivity and profitability.

Agribusiness and Lean specialists, PSVC Advisory and Productivity Improvers have partnered to design and deliver a three day Lean Leader course tailored specifically for commercial agribusiness.

Facilitated by trainers with extensive applied experience, participants learn Lean principles through active participation in the Elphinstone Simulated Work Environment (SWE). Extensive practical examples are also used to show how Lean can be applied to all parts of agricultural supply chains.

This unique and engaging program is aimed at owners, leaders, managers and staff working in commercial agribusiness.

PROGRAM FACILITATORS

COURSE OUTCOMES

During the three day program participants will:

- › Develop an understanding of Lean principles.
- › Be able to identify the nine wastes in an agribusiness.
- › Experience the application of Lean tools and techniques while working in the simulated work environment.
- › Understand the importance of strategic and operational function alignment within an agribusiness.

By successfully completing the training and assessments provided by People Improvers (RTO 45208) participants can achieve accreditation for the following competencies:

- › MSS403011 Facilitate the implementation of Competitive Systems and Practices
- › MSS403002 Ensure process improvements are sustained
- › MSS403024 Work within a constrained process

These competencies also go towards Recognition of Prior Learning (RPL) for other related courses.

Director of PSVC Advisory, **Simon Drum** specialises in improving the market alignment, efficiency and profitability of vertically integrated agribusinesses. With over 23 years of experience in strategic, commercial and operational roles, Simon offers extensive capability in applying lean principles to growing, production, food manufacturing and supply chains for agribusiness.

Productivity Improvers Directors, **Clynton Jaffray** and **Michael Bonney**, are Caterpillar trained and Certified Lean experts who have been applying their expertise across manufacturing, mining, government, education, finance and agriculture industries for over 20 years.

Located in **Burnie Tasmania**, the Elphinstone SWE is one of only three Lean training facilities of its kind in the Southern Hemisphere and the only one located in Australia.

A hands on, simulated work environment, the SWE teaches participants the principles of Lean by putting Lean tools and techniques into practice for immediate application to your agribusiness.

FAQ'S

Who is the training suitable for?

Owners, leaders, managers and front line supervisors working in any function within an agribusiness.

Are there any prerequisites?

An open mind and willingness to learn.

How much does it cost?

Talk to us about charges that may apply to your organisation.

When can I start?

Talk to us for information on the Ag Lean Leader course schedule.
